

Creative Digital Photography for Teens – All Skills

Instructor: Christina Thompson

This introduction class will show students what elements are needed to make the near perfect photograph. The class will focus on composition, colour, design elements and theories of digital photography. We will include many in-class discussion as well as photography outings where the students will be shown how to take a different view or re-look at the world to find interesting photos in everyday scenarios.

Emphasis will be placed on taking a good picture with any camera. Everyone will be required to bring their own digital camera (point and shoot 'party cameras' are just fine as well.) No cell phone cameras allowed. There will also be an introduction to DIY lighting, lenses and professional cameras.

You Will Need:

- A digital camera of any type (no cell phone cameras)
- USB drive / memory stick
- Notebook/ pen
